Table 1 Summary of the results of the regression analysis

100

| Age Group | 2006 | 2007 | 2008 |
|-----------|------|------|------|
| 18-29 | ~85 | ~85 | ~85 |
| 30-49 | ~75 | ~75 | ~75 |
| 50-69 | ~65 | ~65 | ~65 |
| 70+ | ~55 | ~55 | ~55 |

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The number of transformed cells was determined by the number of colonies obtained on the selective medium. The results are the mean of three independent experiments. Error bars represent the standard deviation.

[illegible]

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was plotted against the number of trials for each condition. The number of correct responses increased with the number of trials for all conditions. The number of correct responses was highest for the condition with the highest number of trials (10 trials) and lowest for the condition with the lowest number of trials (2 trials).

1. **Identify the problem.** The first step in the problem-solving process is to identify the problem. This involves recognizing the issue, understanding its scope, and determining the impact it has on the organization.
